MEET THE TEAM

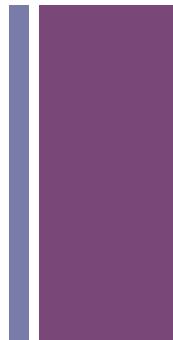

TOP STORIES

Two people were killed and 182 were hospitalized after Asiana Airlines Flight 214 from Seoul, South Korea, crashed and burst into flames at San Francisco International Airport.

Data For Breaking News

What to do NEXT?

- Talk it out with people you respect
- Think Creatively
- Be Open To Possibilities
(Don't form preconceived ideas of what story is)

Data For Breaking News

ASK

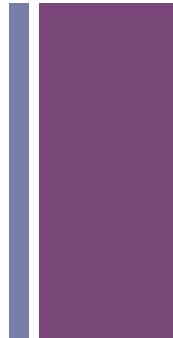

What DON' T we know

after the obvious

“nuts and bolts”?

Data For Breaking News

ASK

- **What ELSE do I or my readers/viewers want to know?**
- **What would help viewers/readers understand this event more?**

Data For Breaking News

ASK

- What will help our organization's coverage provide critical information/context?
- Think outside the box. (*Biggest failures in newsroom are from inability to think creatively.*)

Data For Breaking News

How to Proceed

- What data might be available?
- How easily is it accessed?
- Is it in a form I can understand and analyze?
- How fast can I understand and analyze it?
- What value could it provide to our coverage?
- Where do I go?
- Find relationships; put event into context.
- Make the story pitch.

7 low highway bridges hold similar risks to Skagit span

Originally published May 29, 2013 at 6:17 pm | Updated July 15, 2014 at 3:25 pm

Work crews wait Tuesday as divers check out the submerged deck of the I-5 bridge in the Skagit River, trying to determine the way to break it up. Pieces must be retrieved... [More](#)

[Cheryl Phillips](#)

Washington state has seven other highway bridges with clearances as low as the Interstate 5 Skagit River bridge, where an overheight load destroyed one of four spans last week.

That fact suggests that without tougher oversight of cross-state hauling, the same kind of accident could happen again.

These seven bridges measure 14 feet 6 inches or less at their lowest overhead clearance. They are “fracture-critical,” meaning a single broken beam could cause collapse.

Winner of Nine Pulitzer Prizes

Data: Department of Transportation [National Bridge Inventory](#)

Findings:

- 95 percent of bridges are in good health.
- That still leaves hundreds that could collapse in a bad confluence of events.
- Several bridges on Interstates 5 and 90 are considered “fracture-critical,” meaning that if a single major part is broken, the entire span could fall.
- Others are “structurally deficient,” meaning they have some kind of defect that needs attention.
- Twelve bridges that carry an

Vulnerable bridges not so rare in state

Of Washington's more than 7,700 bridges, inspectors believe 95 percent are in good health. But that still leaves hundreds of aging bridges that could collapse in a bad confluence of events.

By Mike Lindblom, Craig Welch and Cheryl Phillips

Seattle Times staff reporters

On a summer afternoon in 2009, a semitruck carrying apples over the Columbia River near Wenatchee abruptly veered left and smashed through an aging bridge.

The cab broke loose and plunged into the river, killing the driver and her husband. The accident mangled trusses on the 50-year-old Highway 97 Beebe Bridge and left one deformed beam holding half the bridge's weight. The deck sagged ominously.

Still, the bridge stayed aloft.

Whether a span will withstand punishment, as in the Wenatchee area, or collapse as happened Thursday over the Skagit River, depends upon the designs, forces and even an element of chance.

Thursday's collapse on Interstate 5 was triggered when an overheight truck struck one or more overhead crossbeams, causing an entire truss to split. Three people survived falling in their vehicles to the river, and a major travel route will be severed for weeks or months.

The CBS4 I-Team has learned that the wrong parts were initially installed on a major South Florida bridge. It's a bridge that has been the focus of a two-year I-Team investigation into structurally deficient bridges in South Florida. I-Team Investigator Stephen [Stock](#) talked to the whistleblower who said that mistake caused a serious accident on that bridge on June 24, 2009.

That was the day when a ton of metal popped out of the middle of I-395's pavement and smashed into one car, barely missing its driver.

Building toward disaster

The decades preceding the deadly landslide near Oso reflect a shifting landscape with one human constant: Even as warnings mounted, people kept moving in. This interactive graphic tells that story, starting in 1887. [Read more...](#)

Airplane Crash

The screenshot shows the CBS4.com homepage with a navigation bar at the top featuring the CBS 4 logo, a search bar, and a 'GO' button. Below the navigation, there are several promotional banners: one for keeping a PC clean, one for supplement秘密 used by athletes, and one for a cruise deal. On the left, a sidebar lists various news categories like Home, Local News, and Sports News. The main content area features a headline about an airplane crash, with sub-headlines about the plane hitting a house and the pilot's attempt to land. A video player for 'WFOR Video' shows a fiery plane crash scene. At the bottom, there's a Sprint advertisement for a messaging phone.

I-Team: Plane That Crashed May Have Been Worn Down

Nobody Was In The House When The Plane Hit

FAA Says Flight Plan States Only One Person Aboard

Haga Clic Aquí Para Leer Este Titular En Español

OAKLAND PARK (CBS4) — An 80-year-old pilot with a plane in trouble tried to get it back to Ft. Lauderdale Executive airport, but less than a mile from the runway he lost altitude, hit trees and a power line, and slammed into the ground, disintegrating his plane and destroying an Oakland Park home. Now, that crash landing is making it difficult for workers to clear up the scene.

"The scene is actually contained in the sense that all the airplane, all the wreckage is at the residence, so it's not like we have to walk a quarter mile or half mile to gather parts- so it is all there. One of the problems that's hampering us is that part of the house is on top of the wreckage. So that's gonna slow us down a little bit," NTSB Investigator Robert Gretz said Friday night.

Derailed Amtrak train sped into deadly crash curve

by Michael Keller - [@mhkeller](#), Alex Newman - [@alexandranewman](#) | May 13, 2015 2:08PM ET

Train topped 100 mph, twice the legal limit, before derailing, according to an Amtrak data feed

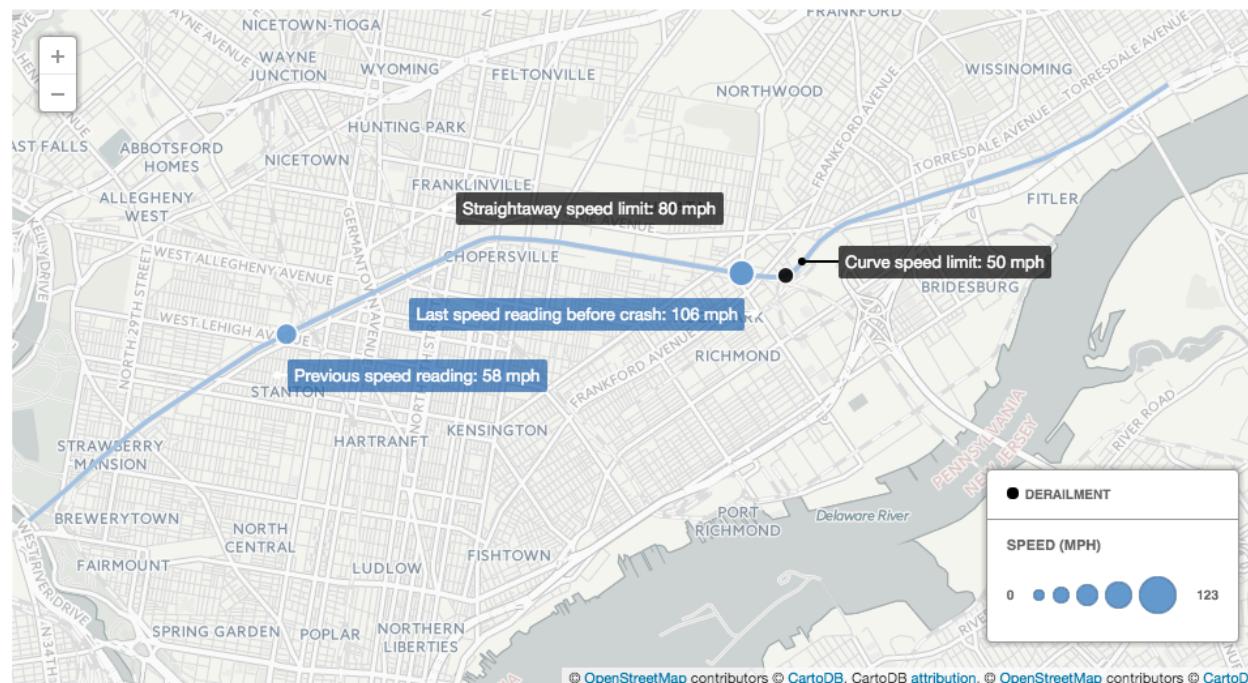

Topics: Amtrak, Pennsylvania, U.S.

UPDATED: May 14, 4:05 p.m.

Train 188 recorded a speed of 106 mph before it headed into a curve designed for 50 mph, according to data from Amtrak's Track a Train feature.

The map below includes speed readings for Train 188's trip from Washington, D.C., until just before the crash.

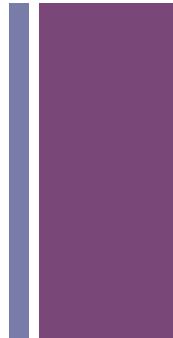

Click for exact speed and time measurements.

Data For Breaking News

Hints

- Be ready BEFORE breaking news hits
- Have favorites folders with quick sites to use in a hurry
- Keep lists of contacts
- Practice using databases during spare time
- Give yourself practice exercises and deadlines

Data For Breaking News

Hints

- Keep a special database folder to turn to when breaking news hits
- Use databases often
- Push yourself to find ‘something different’ once a month or quarter
- Build team approach where all “get it”
- Know how to turn data into interesting copy
